

20 September 2021

Important notice

Dear Valued Guests,

In accordance with the latest guidelines from the Hong Kong authorities, kindly be advised that deep throat saliva will no longer be recognized as an accepted specimen for compulsory testing for cruise passengers departing on Genting Dream from 24 September 2021 (Friday) onwards. Instead, guests can only use combined nasal and throat swab samples collected by professionals for testing purposes.

Cruising guests may arrange their combined nasal and throat swab PCR COVID-19 tests at any mobile collection station, Community Testing Centre (CTC) (<https://www.communitytest.gov.hk/en/faq>) or recognized local medical testing institution and receive their results within 24-hours. Please be reminded that the costs of the tests shall be borne by the passengers.

Note:

If a cruising guest is unfit to undergo the relevant test(s) using sample(s) taken through combined nasal and throat swabs because of health reasons, he/she must be issued a medical certificate by a registered medical practitioner (relevant medical certificate), proving that the individual is unfit to undergo the required combined nasal and throat swab test. As such, the individual will have to undergo the relevant test(s) using deep throat saliva sample(s). Relevant person must keep the SMS notification(s) containing the result(s) of the test(s) and the relevant medical certificate.

On behalf of Dream Cruises, we thank you in advance for your kind attention regarding the latest update.
